Limitations & Disclosures

* Participation in genetic testing is completely voluntary. The patient may withdraw consent or request that their DNA sample be discarded at any time.
* Current testing may not be able to detect all genetic mutations associated with the suspected condition. The accuracy, implications and limitations of this testing should be reviewed prior to testing.
* DNA analysis is limited to the requested test and cannot rule out all other genetic conditions or mutations. The correct clinical diagnosis is important for accurate DNA results.
* DNA testing may reveal information about genes or gene changes other than the requested genetic test. The significance of such a gene change may be unclear. DNA testing may also uncover non-paternity or an undisclosed adoption. Accurate test results depend on knowing the correct relationship between family members.
* Testing is based on the current level of knowledge in medical genetics. It is the patient and/or physician's responsibility to periodically seek updated information, especially before any reproductive decisions are made. The patient is responsible for keeping their physician(s) informed of address changes and new medical and family history information.
* Improved or additional testing may become available either because of changes in laboratory techniques or because of new information regarding genetic cause of the condition(s). In some cases, when improved or additional testing becomes available the patient's DNA may be re-tested upon request.
* Confidentiality will be maintained to the best of our ability as required by the applicable health privacy laws.
